

Wearable sensor industry to reach \$2.5 billion in 2020

The wearable sensor industry will be worth 2.5 billion dollars in 2020. This comes despite the significant economic challenges presented by the Covid-19 pandemic, which has caused a reduction in the total revenue this year.

However, the industry, as per a report by IDTechEx, is expected to progress back to significant growth from 2021, reaching annual revenue of over eight billion dollars a year by 2031.

The Covid-19 pandemic in 2020 has brought additional focus to sensors, including tracking the early onset of conditions, facilitation of wearables for contact tracing, and remote patient

monitoring for patients in isolation.

IDTechEx describes wearable sensors in three waves. The first wave includes sensors that have been incorporated in wearables for many years, often being originally developed for wearable products over previous decades.

The second wave of wearable sensors came following a huge technology investment in smartphones. Finally, with the growing maturity of the wearable technology market over the past decade, many sensors are now designed from the ground up with wearable products in mind.

TV panels shipment to reach 267.53 million units in 2020

Yearly TV panels shipment for 2020 is projected to reach 267.53 million units, a 6.2 per cent decrease YoY, while shipment by area is projected to increase by 0.7 per cent YoY, according to TrendForce's latest investigations.

"The decrease can mostly be attributed to three factors—first, the trend of gradual increases in TV sizes; second, the slowdown in capacity expansions for panel fabs; and finally, the continued high demand for IT panels, the manufacturing of which crowded out fab capacities for TV panels," reads a report by TrendForce.

"Furthermore, due to the aforementioned decreases in TV panel

capacity and TV panel shipment, the glut ratio of TV panel shipment versus TV set sell-in this year is projected to reach 24 per cent, which is lower than the 2019 figure of 31 per cent, thereby generating an upward momentum for TV panel prices," the report adds.

In terms of TV panel shipment by area, total shipment is projected to increase by 3.5 per cent YoY in 2021, reaching 175.5 million square metres. On the other hand, the average size of TV panels will likely further increase to 127cm (50-inch), while the interplay between supply and demand is expected to result in a twenty per cent glut ratio of TV panel shipment.

10 per cent import duty on display panels for mobile and feature phones

In a move to boost domestic manufacturing of handsets and components used in them, the government of India has imposed a ten per cent

import duty on display panels used in the same. It is to be noted here that display panels account for 15 per cent to 25 per cent of the cost of a device

ON THE move

Satish Dhanasekaran becomes the new CEO of Keysight Technologies

Keysight Technologies has appointed Satish Dhanasekaran as the chief operating officer (COO). Dhanasekaran has been president of Keysight's largest business, the Communications Solutions Group, since 2017.

In his role as COO, Dhanasekaran has responsibility for growing orders and increasing annual recurring revenue for the company. He oversees the functions that contribute to these objectives, including market and technology research; development of new technologies, products, and solutions; services; marketing; and sales.

Suzlon Group appoints Ashwani Kumar as group CEO

Suzlon Group has announced the appointment of Ashwani Kumar as its Group CEO. He has over three decades of experience in the areas of projects, business development, and finance at leading Indian power and infrastructure companies. He is a mechanical engineer and an alumnus of IIM Bangalore and The Harvard Business School.

ELCINA appoints new executive committee for 2020-21

Electronic Industries Association of India (ELCINA) has appointed new members of the executive committee for 2020-21. Paresh Vasani is the new president of the committee. He is chairman/MD at Circuit Systems (India) Limited (CSIL).

Vijay Gujarathi is the director and COO of EOS Power India Private Limited. He has been the executive committee member of ELCINA since 2014 and recently appointed as chairman west.

Gagan Bansal is associated with ELCINA for the last eight years as an active member of the ELCINA Executive committee. He has been a member of the task force on electronics components manufacturing. Other members that have been appointed include Sunil Banwari (MD and COO, AT&S India Pvt Ltd), Anurag Dhoot (MD, Epitome Components Ltd), Ashwini Aggarwal (director, Applied Materials India Pvt Ltd).
