

Calendar of Forthcoming Electronics Fairs/Exhibitions/Seminars/Events

Event, Date and Venue	Topics	Contact address for details
Light + LED Expo India 2020 December 3-5, 2020 Pragati Maidan, New Delhi	Will have Future Zone for innovative products, Solar Zone, and Launch Zone for new products	Messe Frankfurt Trade Fairs India Private Limited Website: www.in.messefrankfurt.com Email: deepak.bohara@india.messefrankfurt.com
GITEX Tech Week 2020 December 6-10, 2020 Dubai World Trade Centre, Dubai	Globally recognised and renowned speakers from around the world to discuss technological advancements	GITEX Technology Week Website: www.gitex.com
Renewable Energy India 2020 December 10-12, 2020 India Expo Centre, Greater Noida	Technology leaders, policy-makers, influencers and decision-makers from around the world come together to discuss current challenges and technological advancements	Renewable Energy India 2020 Website: www.renewableenergyindiaexpo.com
CES 2021 January 6-9, 2021 Las Vegas, Nevada	Global consumer electronics show	Consumer Technology Association Website: www.ces.tech
NEPCON JAPAN January 20-22, 2021 Tokyo International Exhibition Center, Tokyo	Asia's leading electronics tech show about R&D and manufacturing, including packaging, with seven concurrent specialised shows	Reed Exhibitions Japan Ltd Website: www.nepconjapan.jp/en
India Electronics Week February 3-5, 2021 Karnataka Trade Promotion Organisation, Bengaluru	Mega electronics and technology show with multiple co-located events including expositions, conference and seminars	EFY Enterprises Pvt Ltd Website: www.indiaelectronicsweek.com
Smart Nation Expo & Forum March 23-25, 2021 MITEC, Kuala Lumpur	The biggest international exhibition on smart cities, 5G services, smart technologies, applications and solutions	Smart Nation Website: www.smartnationexpo.org/ve

Since this information is subject to change, especially due to coronavirus breakout, all those interested are advised to ascertain the details from the organisers before making any commitment.

depending on the quality.

The new duty tariffs are applicable starting October 1 under a phased manufacturing programme (PMP). The Indian Cellular and Electronics Association (ICEA) said that the direct impact on mobile phone prices will be a 1.5 per cent to 3 per cent hike.

As of now, only four companies, including Holitech and TCL, make display panels in India. Earlier this year, the government had introduced a production linked incentive (PLI) scheme that provided incentives to brands that promise local manufacturing and production.

IoT-enabled sensors market to reach 81.07 billion rupees by 2024

With the growing penetration of the Internet of Things (IoT) across various industries, dependence on IoT-enabled sensors that allow communication between devices has increased significantly. The IoT-enabled sensors market in India is anticipated to expand at a CAGR of 62.96 per cent to reach a value of 81.07 billion rupees by 2024 from 4.83 billion rupees in 2018.

In recent years, India has wit-

nessed a notable surge in the usage of connected devices, including connected cars, smart home devices, wearables, and autonomous machines. As a result, IoT installed units in India are anticipated to increase from 60 million devices in 2016 to 1.9 billion devices by 2020.

Similarly, mobile-connected machine-to-machine (M2M) modules are also expected to reach 112 million by 2022. The rise in demand for connected devices is expected to drive the IoT-enabled sensors market during the forecast period.

IoT-enabled sensors, as per the report, dominate the Indian market mostly because of factors like low cost, chip-level integration, low power consumption, and wireless connectivity.

Delhi government to start subsidy transfer for buying EVs

As per a report by the *Economic Times*, the Delhi government plans to start transfer subsidies for buying electric vehicles (EVs) directly to the bank accounts of buyers very soon. The report says that the EV policy will pro-

vide subsidies of up to 30,000 rupees for two-wheelers and up to 150,000 rupees for cars to promote quicker adoption of EVs.

The policy will allow waiving off-road tax and registration fees for EVs. The report states that the software developed to allow this direct transfer is ready and is undergoing safety tests currently.

The report adds that the government is also trying to ensure that those opting for EVs get the financial benefits without facing any issues. The development of dedicated software for the transfer of the subsidy is part of this plan. This will help in online filling up of a form at the EV dealership, where bank account details of the buyer will be submitted as per the report.

The form will be approved by the motor licensing officer of the respective Regional Transport Office (RTO) where the EV will be registered and the amount will be transferred.

Organic electronics market size to surpass \$160.37 billion by 2027

The organic electronics market will surpass 160.37 billion dollars by 2027, as per a report by Precedence Research. The global organic electronics market size was valued at 33.99 billion dollars in 2019, says the research.

Semiconductor led the global market and accounted for more than half of the total market value in 2019, and is expected to grow at the fastest rate over the forthcoming years.

Organic semiconductors are non-metallic materials that offer semiconducting properties. These semiconductors have several advantages as compared to inorganic semiconductors such as mechanical flexibility, light weight, and low cost, thereby offering opportunity to develop devices using low-cost fabrication techniques.

The report adds, "With the rise in awareness for sustainable development, and as organic semiconductors are biodegradable, these are increasingly preferred over their counterparts, thereby increasing the organic electronic market demand. The dielectric material creates demand and opportunities for various applications
