

UL launches new lab in India to support growing solar PV industry

UL has announced the launch of a new laboratory to meet the growing demands of the Indian solar photovoltaic (PV) industry for testing and certification services as per the latest International Electrotechnical Commission (IEC) standards. UL created the new laboratory by investing in a skilled workforce and expansion of its existing solar PV laboratory in Bengaluru.

Eden Renewables India wins three 1,350MW capacity solar projects in Rajasthan

EDF Renewables and Total Eren announced that EDEN Renewables India, their equally owned joint venture dedicated to the Indian solar photovoltaic market, has been awarded three solar photovoltaic (PV) projects for a total of 1,350MWp each in Rajasthan. Constructions are

due to start during the first semester of 2021, and commissioning is expected towards the beginning of 2022.

Wipro acquires Eximius Design

Wipro has acquired Silicon Valley-based engineering services provider Eximius Design for 80 million dollars. As per Wipro, Eximius' expertise ranges from cloud and 5G to artificial intelligence (AI). It has 1,100 employees and reported 35 million dollars in revenue for 2019.

IIIT Hyderabad sets up Smart City Research Centre

The International Institute of Information Technology, Hyderabad (IIIT-H), has set up a Smart City Research Centre (SCRC) with support from MEITY (Government of India), Smart City Mission, and the Government of Telangana. In this ambitious project, 100 cities are being covered for the duration of five years, with a budget of one billion rupees per city per year. As a part of it, Living Lab plans to create an urban area enhancing three value domains: social, economic, and environmental.

in consumer electronics, automotive, digital signage, medical, and security."

India and China likely to generate maximum revenue in LED lighting business

Frost & Sullivan's recent analysis, 2020 Annual Update of Global LED Lighting Market, finds that the increasing demand for energy-efficient lighting, the rising number of smart city projects, and overall infrastructure development are driving the LED lighting market across the globe. The market is estimated to reach 82.0 billion dollars by 2026 from 67.7 billion dollars in 2019, at a CAGR of 2.8 per cent.

However, with the Covid-19 pandemic, the industry is likely to experience varied impacts across regions due to discrepancies in containment measures and lockdown implementation.

From a regional perspective, Indo-Pacific region continues to be the key growth area, drawing 35.4 billion dollars in revenues by 2026, with India and China contributing the maximum revenue. Similarly, after this region, Europe and North America will contribute significantly to the market due to developments in advanced lighting applications related to the healthcare, industrial, office, and hospitality verticals in both the regions.

Government's proposals for development of EV charging infrastructure

The government of India has invited proposals for the installation of elec-

tric vehicles (EV) charging stations on highways and expressways.

The proposals have been invited for EV charging infrastructure on the Mumbai-Pune, Ahmedabad-Vadodara, Delhi-Agra, Bengaluru-Mysore, Bengaluru-Chennai, Surat-Mumbai, Agra-Lucknow, Eastern Peripheral, and Hyderabad-ORR expressways.

A similar proposal also includes developing the EV charging infrastructure on highways, including Delhi-Srinagar, Delhi-Kolkata, Agra-Nagpur, Meerut-Gangotri Dham, Mumbai-Delhi, Mumbai-Panaji, Mumbai-Nagpur, Mumbai-Bengaluru, and Kolkata to Bhubaneswar.

The Centre has approved Phase-II of Faster Adoption and Manufacturing of (Hybrid &) Electric Vehicles in India (FAME) scheme for three years commencing from first April 2019.

Global automated test equipment market to be valued at \$4.82 billion by 2025

The global automated test equipment market was valued at 1.1 billion dollars in 2019 and is expected to be valued at 4.82 billion dollars by 2025 as per a report by ResearchAndMarkets. It added that it will grow at a CAGR of 3.6 per cent.

The growth of the automated test equipment industry is due to its escalating demand in electronic manufacturing sector for examining systems as well as electronic components for defects during production of components. It also helps in identification

and testing of errors in integrated circuits, chip systems, and wafer testing.

This, in turn, will boost the market trends over the coming years. The advent of next-gen devices will further spur market expansion over the years to come. The report said that the thriving vehicle sector and commercialisation of IoT activities will further boost the scope of the business over the forecast timeline.

DC-DC converter market to generate \$17.85 billion globally by 2027

The global DC-DC converter market garnered 8.76 billion dollars in 2019, and is projected to generate 17.85 billion dollars by 2027 as per a report by Allied Market Research. It will grow at a CAGR of 11.1 per cent from 2020 to 2027.

The report says that increase in adoption of electric vehicles, surge in usage of DC-DC converter in railway application, and rise in demand for power electronics component have led to the growth of the global DC-DC converter market. Regulations and safety standards impede the market growth. The rise in adoption of 5G technology in developed countries is expected to bring in new opportunities in the near future.

Based on region, the global DC-DC converter market across Indo-Pacific region has accounted for the highest share, contributing to nearly one-third of the total share in 2019. It will continue its leadership position during the forecast period. It adds that the
