Sunilkumar Gopakumar is working as a senior engineering manager at Collins Aerospace, USA. He has more than thirteen years of experience in the aerospace industry

This article covers an executive's perspective on career opportunities available for non-aerospace engineers in the aerospace domain. Most engineering graduates, with any kind of specialisation, can get an opportunity to work in aerospace

In this article, I have discussed how non-aerospace engineers can work in the aerospace domain and what are the career opportunities available for them. But before we start, I would like to give a little intro about how I ended up working for an aerospace company despite being a student of electronics and communication.

I finished my engineering in 2006 from Anna University in electronics and communication. After completing my

degree, I started attending interviews with companies like Infosys, Cognizant, TCS, and Wipro. I faced outright rejections mostly after the aptitude exam, or the first round of interviews. Finally, I got a job with HCL Technologies, and I was assigned to the aerospace domain. I had no idea about this sector.

After my first day at HCL, they started teaching me about airplanes and domains available in the aerospace industry. Once I
