

Qantum

Visit: <https://www.qosenergy.com/>; **Full version:** Paid

Qantum by QOS Energy is a cloud-based data intelligence platform for asset owners and operators aimed to monitor and boost the performance of renewable plants and storage facilities. After retrieval of data from any plant and system, users can create custom dashboards for key stakeholders, get a streamlined view of different portfolios, define and visualise plants' key performance indicators (KPI), identify problems in renewable plants and sensors, and so on. It is also easy to manage multiple users and have third party access.

AHA Solar

Updated: August 2020

OS: Android and iOS

Download: Full version (free)

AHA Solar is a Solar PV (SPV) app. It is an extension of the online platform with the same name that helps users in the management of technical and sales requirements on the go, thereby boosting work productivity for dis-coms, PV installers as well as state nodal agencies. A map-based user interface is available for calculating the size of the SPV system and energy output before designing. Other features include financial analysis tools, lead management with cloud, generation of the techno-commercial report, and the like.

Surya Mitra

Updated: December 2019

OS: Android and iOS

Download: Full version (free)

Surya Mitra app by the National Institute of Solar Energy (NISE) aims to provide quality services such as the installation of small SPV power plants or services and repairs of existing ones at reasonable prices. Whenever individuals need any service, they can use this GPS-based app to send a message to the nearest Suryamitra. A trained solar person then reaches the user's site to solve the problem immediately. As part of the 'Make in India' programme, this also increases youth employment and improves the businesses of solar entrepreneurs.

Biogas

Updated: February 2019

OS: Android

Download: Full version (free)

Biogas app by Indian Biogas Association (IBA) aims to make any biogas related information available to its users. Features include biogas calculator, resources mapping option, real-time assistance, among others. For calculating all the basic data, users just need to select a substrate from the feedstock choices in the app. Mapping allows users to view resources and waste processing plants in their vicinity and add new ones. Farmers' Corner is designed to improve awareness about the advantages of biogas and bio-slurry among farmers. A section that covers policy initiatives of the central government is also present.

Android

SolarEdge Monitoring

Updated: August 2020

OS: Android and iOS

Download: Full version (free)

SolarEdge monitoring app allows users to get an overall and latest view of system performance. This enables PV installers and system owners to maximise solar energy harvesting. The dashboard includes energy measurements for the entire span, current system power, cumulative graphs of energy production, and much more. Current and forecast weather further assist in the analysis. One can even remotely monitor the installations. A list of all PV sites owned by the user and images of individual sites are also available.

SunPro+ Explore and Own Solar

Updated: August 2020

OS: Android and iOS

Download: Full version (free)

SunPro+ app by Freyr Energy is designed to create a hassle-free experience for anyone looking to install solar systems. The resource library includes information about sizing a solar rooftop system, working and benefits of solar, local policies, and more. Assessment options like ROI, environmental impact, and expected savings are also provided so that users can be certain of installation. After users place an order, they can track and get updates on all aspects of the project. The app is synced with the remote monitoring system of the inverter for receiving real-time performance data.
