Smartphone

With SuperDart Charge

Realme has launched Realme 7 and 7 Pro in India. Realme 7 Pro features a 16.2cm (6.4-inch) Super AMOLED FHD+ (2400 × 1080 resolution) screen with a 20:9 aspect ratio, 90.8 per cent screen-to-body ratio, and 600 nits peak brightness. As for the cameras, it comes with a 64MP IMX682 primary camera and an 8MP 119-degree ultra-wide-angle camera. There's also a 32MP front camera.

The highlight, however, is the 65W SuperDart Charge tech. The company claims that with this technology, the phone can be charged up to a hundred per cent within 34 minutes and fifteen per cent in

three minutes. The 7 Pro has a 4500mAh battery backup.

Realme 7 gets a 16.5cm (6.5-inch) display with FHD+ resolution. It is powered by MTK Helio G95 gaming processor along with a 900MHz Mali-G76 GPU. This smartphone comes with a 5000mAh battery, which supports 30W Dart Charge.

Headphone

With noise cancellation

Sony has unveiled its flagship headphone of the year, WH-1000XM4. The headphone is touted for its industry-leading noise cancellation tech. The noise cancellation is powered by the QN1 chipset. This works along with dual noise sensor technology that captures ambient noise and passes the data to the processor to cut it. This results in a good amount of isolation.

Sony WH-1000XM4 comes with a speak-to-chat feature that automatically stops the music when it detects the wearer speaking something. The headphone can be paired with two devices at the same time.

As for the adaptive sound control, the headphone uses its sense engine to detect if the user is walking, travelling, or waiting, and changes the ambient sound settings accordingly. Supporting voice assistants like Alexa, Google Assistant, and Siri, the 1000XM4 headphone can take calls and support touch gestures to control music playback and volume as well.

Smart TVs

With artificial intelligence

LG has announced the launch of eight new LG OLED models led by two new series—an art-inspired GX Gallery series (available in 195.58cm and 165.1cm sizes) and Real 8K 223cm (88-inch) ZX series. This new range of 8K and 4K LG OLED and NanoCell TVs come with artificial intelligence-enabled features for upgraded performance.

At the heart of the Real 8K TVs is the new α (Alpha) 9 Gen 3 AI 8K processor. This processor leverages upgraded processing power and artificial intelligence deep learning algorithms to improve picture quality and helps upscale existing 4K content.

The minimalist Gallery series comes with wall mountable designs and an ultra-thin form factor. Paired with a specially-designed wall mount that's included in the box, these models are meant to transform the OLED into a piece of art.
