## PicoVNA 108

vector network analyzer

### High performance, portability and low cost

- 300 kHz to 6 or 8.5 GHz operation
- Over 10000  $S_{11} + S_{21}$  per second
- Up to 124 dB dynamic range at 10 Hz bandwidth
- Half-rack, small-footprint, lightweight package
- Reference plane offsetting and de-embedding
- High speed of up to 5500 dual-port S-parameters per second
- Quad RX four-receiver architecture for optimal accuracy
- 0.005 dB RMS trace noise at maximum bandwidth of 140 kHz
- PC-controlled over USB from a Microsoft Windows interface
- Time-domain and port impedance transformations

The new PicoVNA 108, in a low-cost, small-footprint and portable format, is the second model in the PicoVNA range. It can see out further to 8.5 GHz, and it can see down deeper to -124 dB.

The new model provides new "save on trigger" synchronization for multiple measurements. We have also added offset frequency capability to the Quad RX architecture, and synchronization and control of the PicoSource AS108 8 GHz agile synthesizer from within the PicoVNA 3 software. This instrument pairing allows RF mixer and RF/IF system characterizations using the PicoVNA 108. Other popular third-party signal generators are also supported.
