microchip.com/avr-da

The Functional Safety Ready AVR-DA family is the new generation of AVR microcontrollers running up to 24 MHz across the full supply voltage range 1.8V to 5.5V featuring intelligent analog and core independent peripherals.

The AVR-DA family uses the latest Core Independent Peripherals and low-power capability to handle real-time control functions in industrial control, home appliance, automotive and Internet of Things (IoT) applications. The Event System and Configurable Custom Logic (CCL) peripherals offer near-zero latency for time-critical functions. Intelligent Analog peripherals like 12-bit differential Analog-to-Digital Converter (ADC), Zero-Cross Detect (ZCD), 10-bit Digital-to-Analog Converter (DAC) and the latest-generation Peripheral Touch Controller (PTC) put the AVR-DA family in the center of sensor interface, system monitoring and human interface applications. 5V operation for increased noise immunity and low-power features ease power supply concerns.

- Product certifications made easier with Functional Safety supporting documentation and development tools
- Add IoT and connectivity to your application, thanks to the high memory densities and SRAM-to-Flash ratio
- Design robust and noise-immune applications with built-in safety features and 5V supply
- Create state-of-the-art capacitive touch interfaces using the latest-generation PTC
